

Energy prices in Europe

Historical analysis & understanding current energy price levels

Objective

This course is focused on energy price evolution and drivers in international markets, with a special emphasis on the European market.

Upon completion of this training course, participants will be able to:

- analyze the historical trends of energy prices
- understand the current price level for each energy
- benefit from a prospective analysis from the interpretation of POLES results
- evaluate the fundamentals of future carbon markets
- become familiar with the new European carbon market

Who will benefit

This course is designed for energy industry and administrative professionals, and for those who work in energy related sectors: purchasers, bankers, analysts, economists, project managers, consultants, engineers...

Teaching method

All seminars are animated by international experts with more than 15 years of experience in the energy sector. Case studies will be explored to practice concepts learned during the seminar. Quality teaching materials will be provided during the seminar.

Program

Session 1 Oil prices

Session 2 Gas prices

Session 3 Electricity prices

Session 4 Coal prices

Session 5 Carbon prices

Training offered upon request.
